

The hycolor package

Heiko Oberdiek*

<heiko.oberdiek at gmail.com>

2016/05/16 v1.8

Abstract

Package hycolor implements the color option stuff that is used by packages hyperref and bookmark. It is not intended as package for the user.

1 Documentation

The package `hycolor` implements color options for packages `hyperref` and `bookmark`.

Package `xcolor` provides macros for extracting color values and converting color data to other color models. If this package is loaded, the full range of color specifications of packages `color` and `xcolor` are supported including the optional argument for the color model.

```
\hypersetup{linkbordercolor=red}% needs xcolor
\hypersetup{linkbordercolor=[named]{red}}% needs xcolor
\hypersetup{linkbordercolor=[rgb]{1,0,0}}
```

Without package `xcolor` some of the options only support some models, if they are given directly, e.g.:

```
\bookmarksetup{color=[rgb]{1,0,0}}
```

Because of compatibility some options of `hyperref` also support space separated RGB values:

```
\hypersetup{linkbordercolor=1 0 0}% is the same as
\hypersetup{linkbordercolor=[rgb]{1,0,0}}
```

Coloring is optional, it can be turned off by using an empty value:

```
\hypersetup{linkbordercolor={}}
```

The PDF specification knows some kind of an empty color setting without values. This applies to form field colors. The new A virtual color model `empty` is introduced for this purpose, e.g.

```
\TextField[backgroundcolor={[empty]{}}, ...]{...}% or
\TextField[{backgroundcolor=[empty]{}}, ...]{...}
```

PDF specification 1.7 also allows this for border link colors. But this isn't currently supported by this package, because the tested viewers (AR7/Linux, xpdf 3.00, ghostscript 8.54) don't support this yet. In contrary ghostscript generates an error message.

1.1 Summary

Color option	Models without xcolor	RGB color	Model empty
BKM.color	gray, rgb	no	no
Hyp.*color	all	no	no
Hyp.*bordercolor	gray, rgb	yes	no
Field.*color	gray, rgb, cmyk	yes	yes
AtFi.color	gray, rgb	yes	no

“RGB color” means that the color value can be given as space separated RGB numbers (real numbers in the range from 0 to 1). Explanation of the color option prefixes:

Prefix	Explanation
BKM	Package bookmark
Hyp	Package hyperref: package options or <code>\hypersetup</code>
Field	Package hyperref: Form field options
AtFi	Package attachfile2: option color

2 Implementation

```

1 <*package>
2 \NeedsTeXFormat{LaTeX2e}
3 \ProvidesPackage{hycolor}%
4 [2016/05/16 v1.8 Color options for hyperref/bookmark (HO)]%
5 \RequirePackage{xcolor-patch}[2016/05/16]
```

2.1 Normalization

2.1.1 Sanitize value of color option

Procedure DefSanitized(cmd, value)

Param: *cmd* (macro)

Param: *value* (value of color option)

Result: *value* is expanded, sanitized, and stored in macro *cmd*.

Initialize active characters;

cmd := Expand *value*;

Sanitize *cmd*;

Sanitization means that the string does not contain any macros or special tokens. It consists of characters with catcode 12 (other). The only exception is the space with catcode 10 (space).

`\HyColor@DefSanitized`

```

6 \begingroup
7 \catcode`\!=13 %
8 \catcode`\:=13 %
9 \catcode`\-=13 %
10 \catcode`\+=13 %
11 \catcode`\;=13 %
12 \catcode`\|=13 %
13 \catcode`\>=13 %
14 \edef\x{%
15   \def\noexpand!\{\string!}%
16   \def\noexpand:\{\string:}%
17   \def\noexpand-{\string-}%
18   \def\noexpand+{\string+}%
19   \def\noexpand;\{\string;}%
20   \def\noexpand"\{\string"%}
21   \def\noexpand>\{\string>}%
22 }%
23 \def\y#1{\endgroup
24   \def\HyColor@DefSanitized##1##2{%
25     \begingroup
26     \csname @safe@activetrue\endcsname
27     #1%
28     \edef\x{\endgroup
29       \def\noexpand##1{##2}%
30     }%
31     \x
```

```

32 \onelevel@sanitize##1%
33 }%
34 }%
35 \expandafter\y\expandafter{\x}

```

2.1.2 Normalize result

Procedure NormalizeNum(value, cmd)

Param: *value* (Sanitized explicit number)

Param: *cmd* (Macro that stores result)

Result: *cmd* contains normalized number

```

if value pt < 0pt then
|   cmd ← 0;
else if number before dot of value < 1 then
|   cmd ← number after dot of value;
|   cmd ← strip trailing zeros from cmd;
|   if dot remains only then
|   |   cmd ← 0;
|   end
else
|   cmd ← 1;
end

```

The number is limited to the range between 0.0 and 1.0 and formatted as short PDF number without leading or trailing zeros. The precision of the number isn't changed.

\HyColor@NormalizeNum

```

2.2 Main algorithm for color options

Procedure MainColorOptionAlgorithm(*key*, *value*, *cmd*)

Param: *key* (name of color option)

Param: *value* (value of color option)

Param: *cmd* (macro that stores result)

Result: Macro *cmd* contains the calculated color specification string or has the meaning of `\relax` if the color must not set

DefSanitized(*temp*, *value*);

Call option specific algorithm(*key*, *temp*, *cmd*);

2.3 Package bookmark

Since v0.8 2007/03/27 package `bookmark` only provides one color option `color`. Because option `rgbcolor` can easily given as color specification in model `rgb`:

$$\text{rgbcolor}=\langle r \rangle \langle g \rangle \langle b \rangle \equiv \text{color}=[\text{rgb}]\{\langle r \rangle, \langle g \rangle, \langle b \rangle\}$$

Package `bookmark` stores the result in macro `\BKM@color`. The empty string is

interpreted as *no color*.

Procedure BookmarkColor(value, cmd, package, option)

Param: *value* (value of option color)

Param: *cmd* (macro for result)

Param: *package* (package name for error message)

Param: *option* (option name for error message)

```

switch value do
  case empty do
    | cmd ← no color;
  end
  case with model do
    | if with xcolor then
    |   cmd ← ConvertToRGB(model, values);
    else
    |   if model = rgb then
    |   | cmd ← values as normalized values;
    |   else if model = gray then
    |   | cmd ← values as normalized tripled values;
    |   else
    |   | error;
    |   end
    end
  end
end
otherwise do
  | if with xcolor then
  |   (model, values ← get model and values;
  |   cmd ← ConvertToRGB(model, values);
  else
  |   error;
  end
end
end
end

```

```

2.6 Package attachfile2

Before PDF-1.7 only RGB values are permitted in annotations. Since PDF-1.7 the color entry in annotations understands several color models, depending on the size of the color array:

- Zero entries: means transparent, not useful for file attachments. AR7/Linux and AR8/Linux show black instead.
- One entry: color model ‘gray’.
- Three entries: color model ‘rgb’.
- Four entries: color model ‘cmyk’.

An empty color specification is interpreted as “no color”.

2.7 Patch for package xcolor

Because the test files triggered a bug in package xcolor of version 2007/01/21 v2.11. I contacted the author of xcolor Uwe Kern. He responded with a test version 2007/03/27 v2.12a00 that fixes the problem. However, apparently he did not found the time for an official release yet. Thus I have reluctantly written the following patch package using the fixes of v2.12a00.

The patch is immediately applied if package xcolor is already loaded. Otherwise the patch is delayed using \AfterPackage if package scrfile is loaded. As last resort \AtBeginDocument is used.

```

533 <*xcolor>
534 \NeedsTeXFormat{LaTeX2e}
535 \ProvidesPackage{xcolor-patch}[2016/05/16 xcolor patch]

2.7.1 Fix fragile \@frameb@x

\fbox becomes fragile, because the internal \@frameb@x is redefined by package xcolor. The redefinition is no longer robust. Test file:

```

\documentclass{article}
\usepackage{xcolor}
\makeatletter
\protected@edef\x{\fbox{abc}}
\@@end

674 \ifundefined{XC@frameb@x }{%
675   \expandafter\let\csname XC@frameb@x \endcsname\XC@frameb@x
676   \edef\XC@frameb@x{%
677     \noexpand\protect
678     \expandafter\noexpand\csname XC@frameb@x \endcsname
679   }%
680   \expandafter\ifx\csname XC@frameb@x \endcsname\@frameb@x
681     \let\@frameb@x\XC@frameb@x
682   \fi
683 }{}%
684 }
685 \end{xcolor}

```

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

[CTAN:macros/latex/contrib/oberdiek/hycolor.dtx](#) The source file.

[CTAN:macros/latex/contrib/oberdiek/hycolor.pdf](#) Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

TDS refers to the standard “A Directory Structure for T_EX Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain T_EX:

```
tex hycolor.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>hycolor.sty</code>	→ <code>tex/latex/oberdiek/hycolor.sty</code>
<code>xcolor-patch.sty</code>	→ <code>tex/latex/oberdiek/xcolor-patch.sty</code>
<code>hycolor.pdf</code>	→ <code>doc/latex/oberdiek/hycolor.pdf</code>
<code>test/hycolor-test1.tex</code>	→ <code>doc/latex/oberdiek/test/hycolor-test1.tex</code>
<code>test/hycolor-test2.tex</code>	→ <code>doc/latex/oberdiek/test/hycolor-test2.tex</code>
<code>test/hycolor-test3.tex</code>	→ <code>doc/latex/oberdiek/test/hycolor-test3.tex</code>
<code>test/hycolor-test-xcol1.tex</code>	→ <code>doc/latex/oberdiek/test/hycolor-test-xcol1.tex</code>
<code>test/hycolor-test-xcol2.tex</code>	→ <code>doc/latex/oberdiek/test/hycolor-test-xcol2.tex</code>
<code>test/hycolor-test-xcol3.tex</code>	→ <code>doc/latex/oberdiek/test/hycolor-test-xcol3.tex</code>
<code>test/hycolor-test-xcol4.tex</code>	→ <code>doc/latex/oberdiek/test/hycolor-test-xcol4.tex</code>
<code>hycolor.dtx</code>	→ <code>source/latex/oberdiek/hycolor.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

¹<http://ctan.org/pkg/hycolor>

4.4 Refresh file name databases

If your $\text{T}_{\text{E}}\text{X}$ distribution (te $\text{T}_{\text{E}}\text{X}$, mik $\text{T}_{\text{E}}\text{X}$, ...) relies on file name databases, you must refresh these. For example, te $\text{T}_{\text{E}}\text{X}$ users run `texhash` or `mktextlsr`.

4.5 Some details for the interested

Unpacking with $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$. The `.dtx` chooses its action depending on the format:

plain $\text{T}_{\text{E}}\text{X}$: Run `docstrip` and extract the files.

$\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$: Generate the documentation.

If you insist on using $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ for `docstrip` (really, `docstrip` does not need $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{hycolor.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdf $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$:

```
pdflatex hycolor.dtx
makeindex -s gind.ist hycolor.idx
pdflatex hycolor.dtx
makeindex -s gind.ist hycolor.idx
pdflatex hycolor.dtx
```

5 Catalogue

The following XML file can be used as source for the [\$\text{T}_{\text{E}}\text{X}\$ Catalogue](#). The elements `caption` and `description` are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is `hycolor.xml`.

```
1144 <*catalogue>
1145 <?xml version='1.0' encoding='us-ascii'?>
1146 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>

1169 </catalogue>

```

6 History

[2007/04/09 v1.0]

- First version.

[2007/04/11 v1.1]

- Line ends sanitized.

[2008/07/29 v1.2]

- Support for package `attachfile2` added.

[2008/08/01 v1.3]

- Patch package `xcolor-patch` added that fixes bugs in package `xcolor` to get the test files running.

[2008/09/08 v1.4]

- Fix added to package `xcolor-patch`: Fragile `\@frameb@x` (used in `\fbox`) is made robust.

[2009/10/02 v1.5]

- Doku fixes (Herbert Voss).

[2009/12/12 v1.6]

- Short info shortened.

[2011/01/30 v1.7]

- Package `xcolor-patch` uses package `hopatch`.

[2016/05/16 v1.8]

- Documentation updates.

7 Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
